Preface

Imagination and creativity are one of the most powerful gifts of the human mind. It allows us to think beyond and explore possibilities and create ideas. With this belief, *Manava Bharati International School* comes with this first unfiltered magazine of the session 2026-27, **“Imagine Life Without AI”**, a collection of thoughts, reflections and creative expressions of our class VIII students.

Now a days. Artificial Intelligence has become an integral part of our daily life. It influences the way we learn and communicate. It is widely used in solving problems. On the other hand, it is destroying young minds. Keeping this in mind students were encouraged to think during class hour on the above-mentioned topic. Students were encouraged take a pause, close their eyes and imagine a world without AI—a world where creativity and originality matter. The objective of the session is to inspire young minds to think critically and independently.

The write-ups in this magazine are original and unfiltered. Each article reflects a unique perspective, imagination and understanding of the topic. We have held the originality of their thoughts, allowing them to experience their ideas exactly as they emerged in their minds. Do not let grammar dominate your originality.

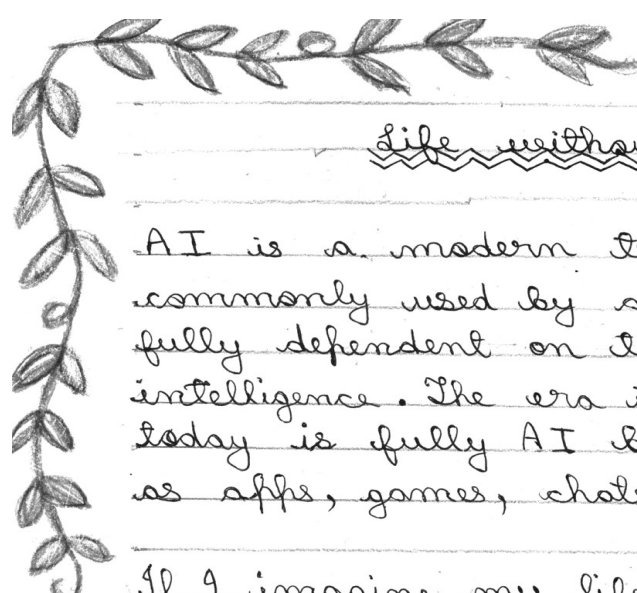

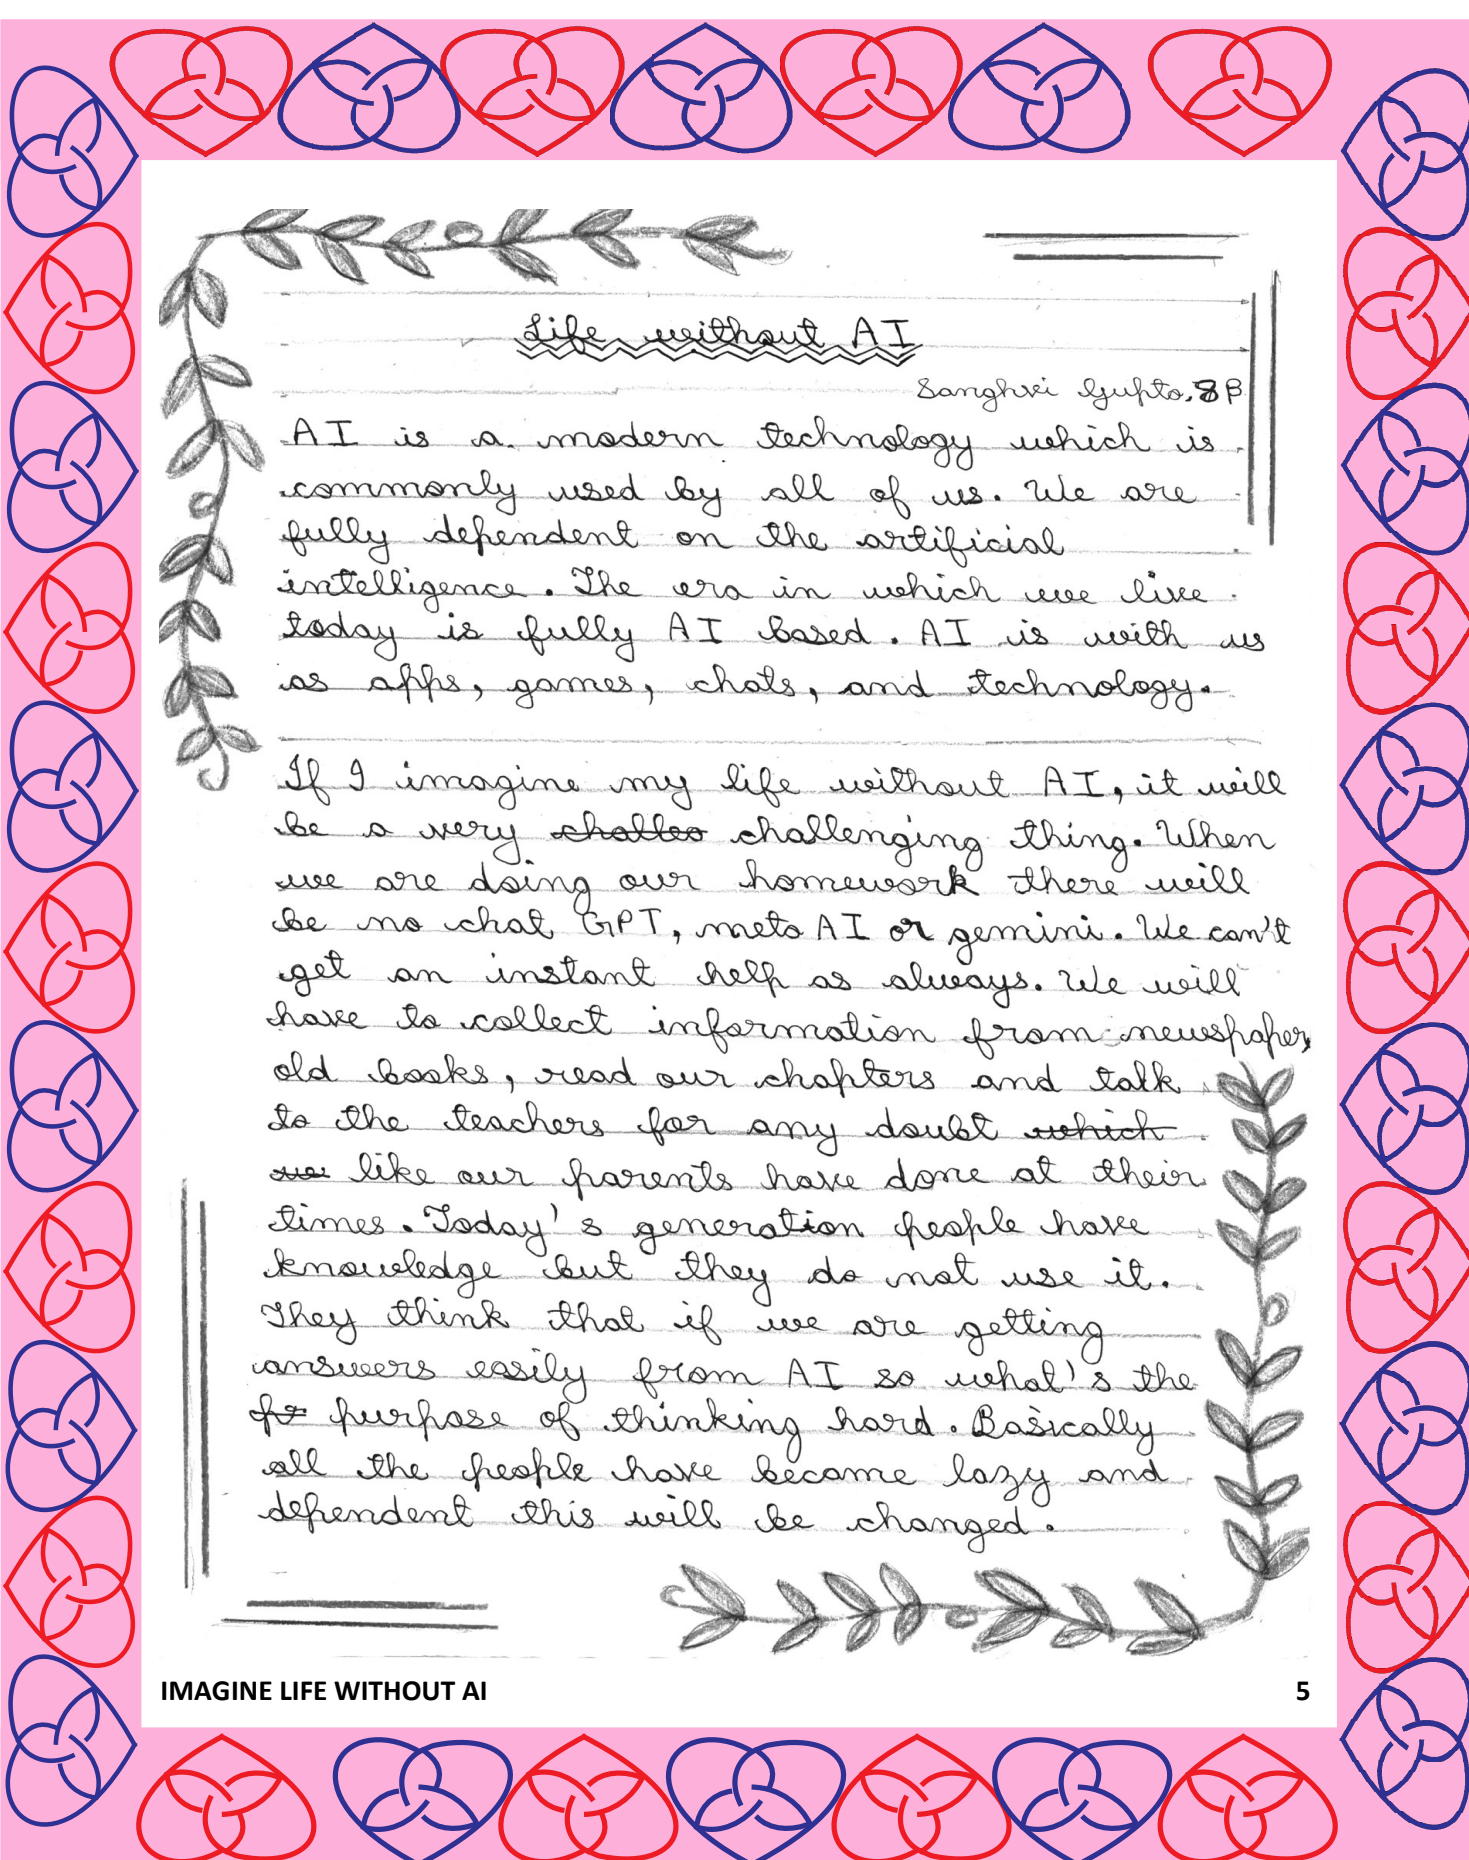

Thanks to Mr. Sumit, Computer teacher whose initiative, guidance, encouragement and coordination motivated students to engage with this thought-provoking theme. His efforts provided a space for students to express their ideas freely and confidently.

At Manava Bharati International School, we believe that every child has a story to tell. By providing opportunities, our aim is to nurture creativity, strengthen writing abilities and develop imagination and critical thinking skills among students. We hope this magazine will encourage students to continue exploring their thoughts through imaginative writing.

We congratulate all the young authors for their participation and commend them for sharing their imaginative ideas with us. We also congratulate Mr. Mukesh Kumar Srivastava for designing and compilation work. We urge parents to read the article and encourage young authors for their imaginative and creative write-ups. This will encourage young minds to think beyond the walls.

Happy Reading!!!

Anupam Mishra
Principal

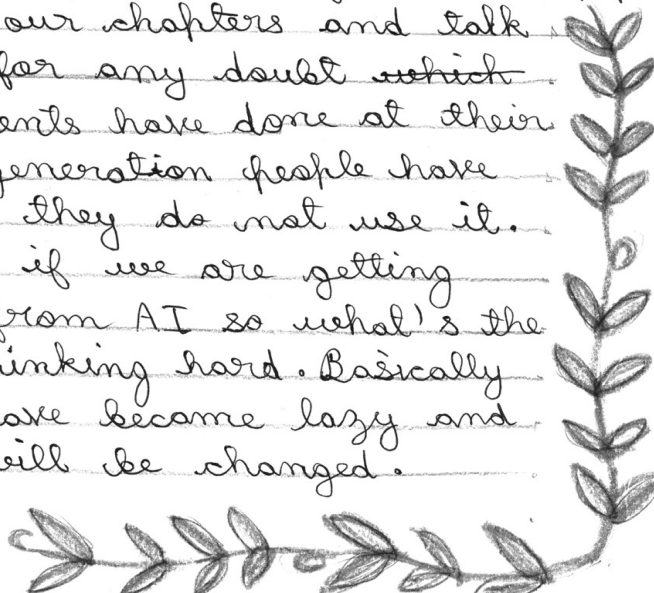

Life without AI

Sanghvi Gupta, SP

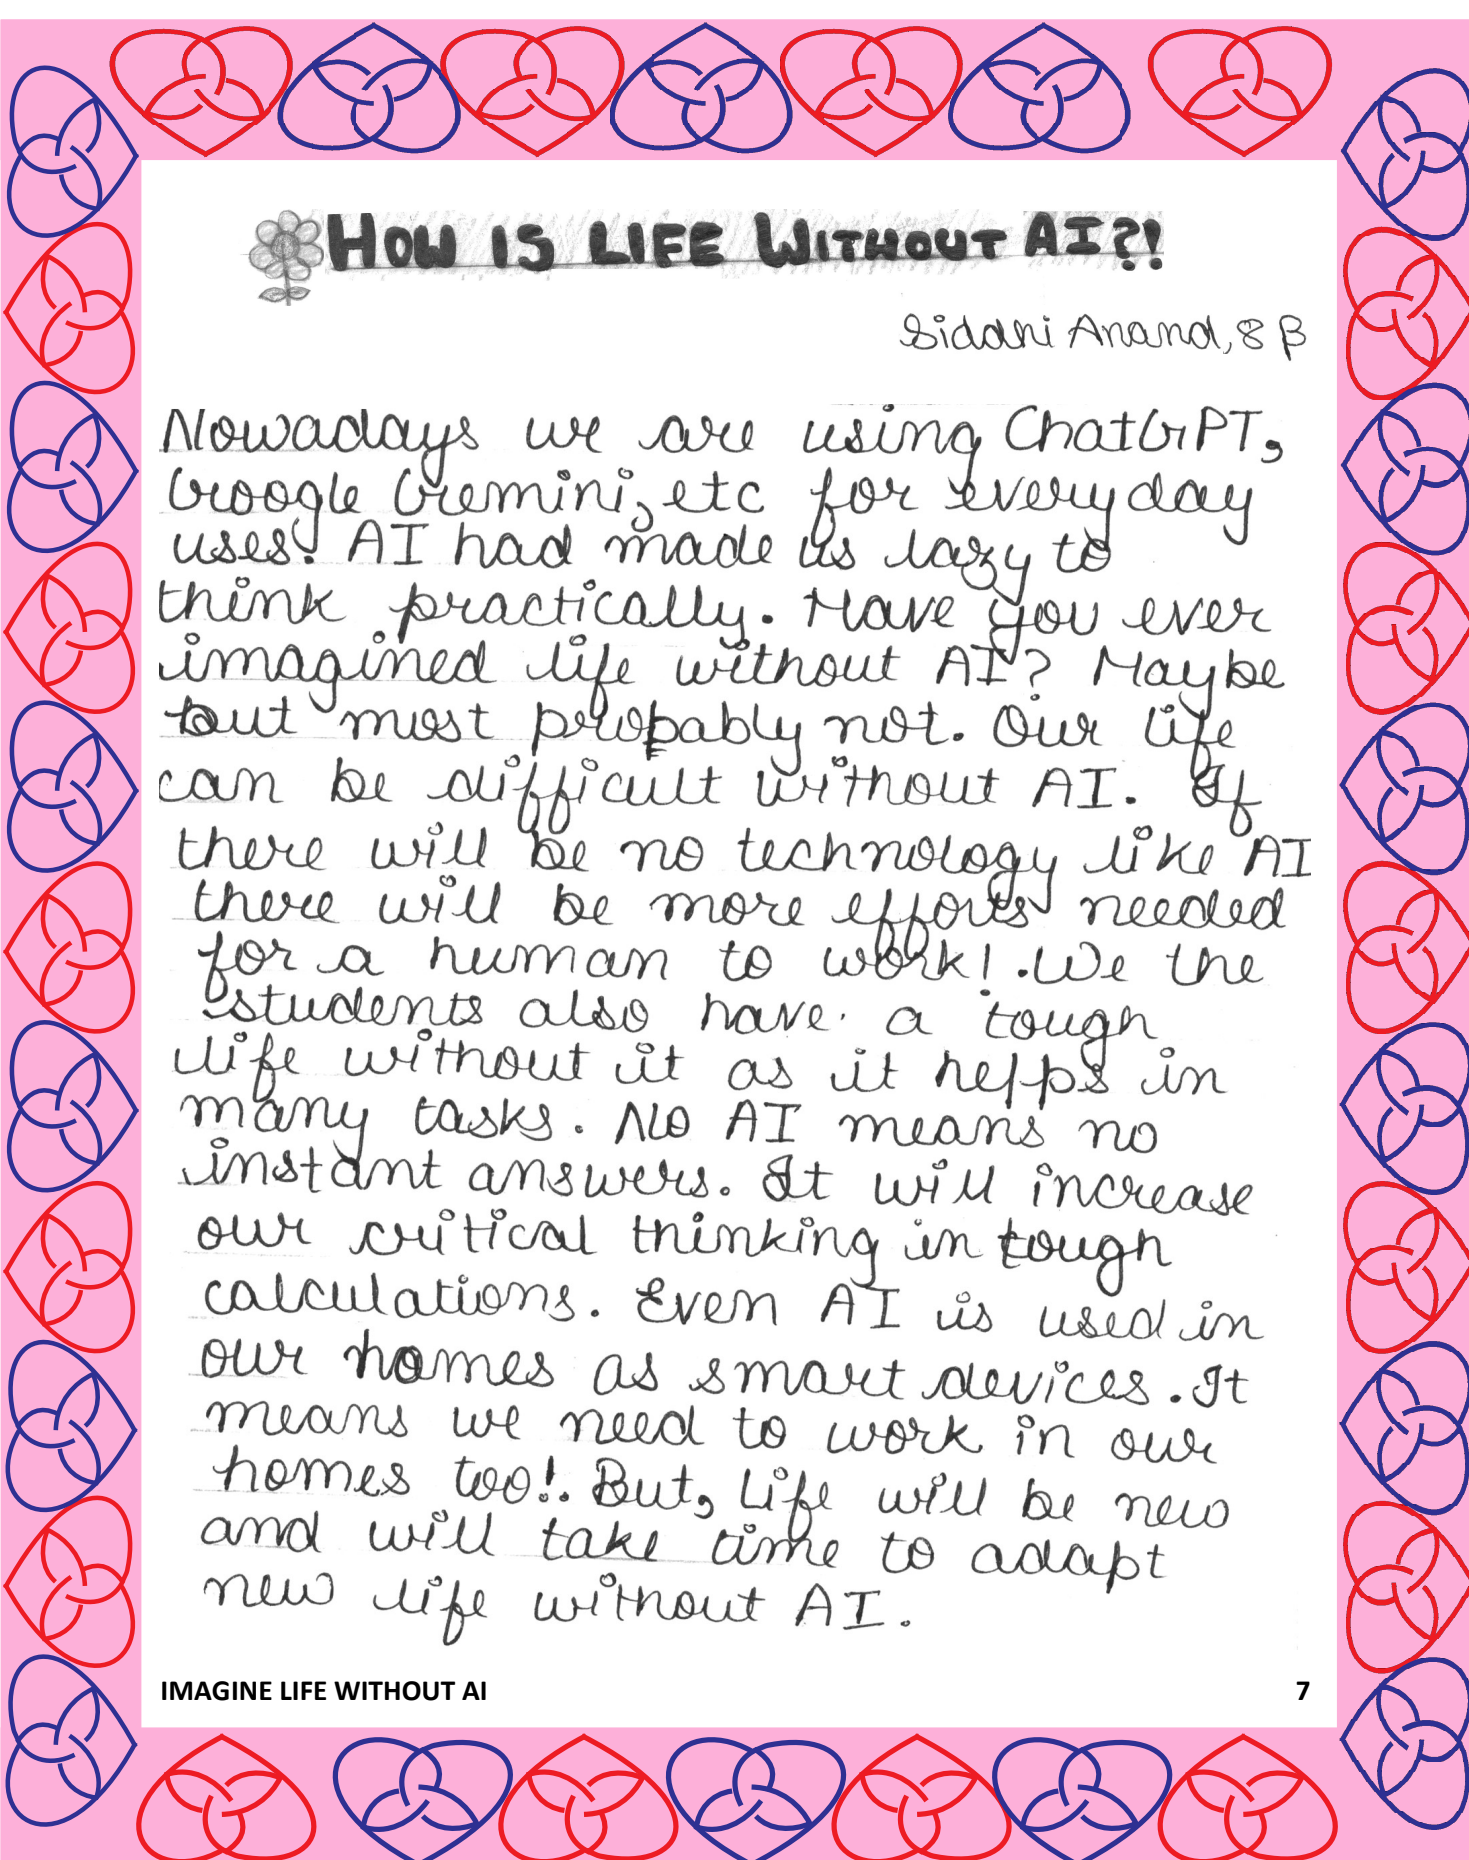

AI is a modern technology which is commonly used by all of us. We are fully dependent on the artificial intelligence. The era in which we live today is fully AI based. AI is with us as apps, games, chats, and technology.

If I imagine my life without AI, it will be a very ~~challor~~ challenging thing. When we are doing our homework there will be no chat GPT, meta AI or gemini. We can't get an instant help as always. We will have to collect information from newspapers, old books, read our chapters and talk to the teachers for any doubt which ~~we~~ like our parents have done at their times. Today's generation people have knowledge but they do not use it. They think that if we are getting answers easily from AI so what's the ~~for~~ purpose of thinking hard. Basically all the people have become lazy and dependent this will be changed.

We are just chatting online and playing virtual games online which is not bad it also increases our mind skills. But if their will be no AI then kids will start playing outdoor games and will start interacting with people face to face which will be a fantastic thing.

So, I think that if their will be no AI then our life will be more manual than being virtual. It will become a traditional and a enjoyable life. Its very difficult to live without AI but its better to live without AI.

HOW IS LIFE WITHOUT AI?!

Siddani Anand, 8 B

Nowadays we are using ChatGPT, Google Gemini, etc for everyday uses! AI had made us lazy to think practically. Have you ever imagined life without AI? Maybe but most probably not. Our life can be difficult without AI. If there will be no technology like AI there will be more efforts needed for a human to work! We the students also have a tough life without it as it helps in many tasks. No AI means no instant answers. It will increase our critical thinking in tough calculations. Even AI is used in our homes as smart devices. It means we need to work in our homes too!. But, Life will be new and will take time to adapt new life without AI.

Life Without AI

Aarushi, 8B

Life without AI is very simple and fun.
and ~~bit~~^{bit} harder. because In today's world

people are dependent on AI only for every small work. Students who study online they have to go to teacher and study. If we get any doubt about anything we searched online and find answer easily. But there are some advantages of AI also, because Environment energy will be reduced. People thinking ability will be more and they can spend time with their families and if students would write their ~~ans~~ assignment by themselves their critical thinking will increase. and we use AI in our homes also, from smart devices if ai will be disappear we have to do our home work by ourselves. We use AI in calculation also, we would have to calculate by ourselves. People will talk face to face neither by chatting, we will go to play outside instead of playing online games. Life without AI will be more traditional and simple.

Life without AI

Kumari Bhawna - 8 'B'

Life without AI is very simple and little harder. People would do all work by themselves. People would spend more time with family and friends. We would ask teachers and parents for help. People would read books and learn new skills.

- No smart machines
- Play more outside
- Life would be fun.
- No smart assistants
- No one copy answers from AI
- We become more creative.

Life without AI

Vagisha Kumar 8B

Nowadays AI has played a huge role in our life. AI helps us a lot with our homework, finding recipes, or finding ~~to~~ tutorials. ~~AI~~ We ~~sho~~ AI should be used in a limit. Life without AI will be hard for most of us. We are very dependent on AI. When we use too much AI it will lose our own thinking ability and our creativity. It makes us unable to think on our own and be creative. Life without AI will be simpler and better. It will force us to think on our own and think of our own ideas. It will make us more productive. AI gives us easy access of everything which has made us lazy and without AI we will learn to work hard to do things. AI stands for Artificial Intelligence. It is important in our daily lives but as long as we use it in a limit. ~~It has~~ AI has many benefits but it can also be harmful as well.

Life without AI

Rudra Pratap

In today's life AI is very important for us. Everyone depends on AI. AI seized the job of many people and it makes the life easier for human. Because of the AI maximum people forgot about hard work. AI removes the hard work from life. Hard work is very important for everyone. Everyone can know themselves from hard work. Without AI many^{of} people get jobs so they don't die from hunger. Everybody will do struggle and hard work in their life without AI. The person who gets success by hard work knows the value of the struggles that he does in the life. Hard work and struggle makes a ~~man~~^{human} perfect. Without AI the consumption of electricity will reduce. And without AI everyone's creativity and imagination will increase and the thinking level will increase. Without AI everyone's problem-solving level will also increase. AI makes the life easier. But ~~the~~ hard work and ~~struggle~~^{struggle} makes the life "perfect and successful."

Life without AI

Kushagra Sinha

Life without AI would become difficult as it is not easy to do work without it. Students, employees, businessmen etc all of them use AI. It is used by government as well for many works like traffic manage, for giving fine by detecting it through cameras. It is used by engineers to take ideas about building their products by the help of AI Models. Businessmen would take profit less ideas. Schools would take ideas for creative activities in which students could participate. It is also used by students to take help about Homeworks and projects. Teachers are asked for taking help from models to set up questions. AI is something th without it, people would have to do more human work. It's really easy as students and everyone is known to AI.

Life without AI

Clalhor VIII - B

A.I has been a really influential ~~model~~ ^{model} since ^a few years, it does a lot of work for us, we are really ~~B~~ dependent on A.I. It does all the business work and other digital work for people. It is really difficult to work without A.I. People who use A.I are ~~o~~ getting high-paying jobs and those who cant are getting fired but without A.I employment would increase. Without A.I the market would ~~ce~~ crash, many business empire ~~ce~~ collapse. Many people are making a living out of A.I, they would become homeless. Even I take help from A.I to upgrade my skills and learn new skills, without it I would be talentless. After all, without A.I life is very hard.

LIFE WITHOUT AI

Yuvraj Singh Yadav, 8 B

Living without Artificial Intelligence is equal to living without Technology. It will create very big problems for creators because AI is a very useful tool for editing and creating videos for the social media apps like YouTube. The advantage is that people will get more opportunity of work but the accuracy will be decreased. Life will become difficult without AI.

Life without AI

Humayun Aryan

If AI vanishes from the world just for a few days
Things that will happen :

- A lot of Traffic: Because the light system is done by AI.

- More Employment: Now a days AI is taken jobs
before 2000 After 2010

NO AI X MORE
Employment ↑

1,000 people
in a small
Business

HI ✓ Less Employment ↓

1 person
Business

- Students marks improvement: Students are using AI to do their work ~~and~~ by their own learn concepts

- Reveal of Vibe Coders: Vibe coders are the coders ~~who~~ which uses AI to write their code.

When ~~there~~ NO AI

Real Coder will Glows up.

- Things will slow down: like servers which are handled by AI will have to ~~be~~ hire workers.

Life Without A.I

Adarsh Mishra

We are living in A.I Era currently. Our work burden will get increased. We will not be able to do our work fast. There will be a lot of problems. We'll go ~~D~~ to Analog Generation from Digital Generation. But there will be a positive for students that they will become more creative and their mind will get sharp

Life without AI

Alfiya Atiq, VIII B

AI has become a very important Part in modern technology. People have started using it for their benefits or jobs, AI usage has increased and Popularised after 2022-2023, ~~ex~~ People use it for different and numerous things because AI makes our tasks easier and ~~Does~~ faster. I use AI for doing my holiday projects and assignments, it gives me new ideas. I've to admit that my life would've stayed dull without AI chatbots like chatGPT, Meta AI, Grok AI and Gemini AI. My most favourite AI chatbot is Grok, Gemini has also played a very important role in the life of people like me by enhancing my knowledge and comforted me by telling the correct genealogy of Jutankhamun and Cleopatra.

In conclusion, AI is a savior of the world (in my opinion). AI should take over all the Blue Collar jobs ~~as~~ as this will prevent workplace deaths or injuries that humans have to endure.

Life without AI

Hammad Afaq

AI is the important part of Internet system in modern life. It is very Intelligent some the burden of human will increase.

The working will slow at office, medical, some place will be disturb. Human

energy will need more to the working.

AI will do help to do easy work.

Digital era will end if AI will not there. Working in Medical will be take time in test reports.

Advantage will human critical thinking will be increase

Life without AI

Aaradhya 8 B

Life without AI is tough and easy both. it is tough because without AI, google, chatgpt, perplexity, etc. we cannot get any type of information nor any current affairs ~~because~~ to be cautious about our surroundings ~~and~~. It is ~~also~~ also easy and good without AI too because without AI ~~we~~ we will not spend much time on mobile phones and ~~we~~ play outdoor games.

Life without AI

tanzeer Rahman-8B

We can't live ~~out~~ without AI. It gives a huge helps to us. we use it in our daily life. Life without ai is very hard. helps to find answers, recipes. sometimes when you are bored you also talk to him and share your ~~big~~ memories. my fav ai is ai and it is very much helpfull some of the examples are meta ai, google gemini and many more. we should use ai in limit overuse can be harmful to us. It also helps to sharp our mind if we didn't use it its very hard.

Life without AI

2047, 8th Dec

Life without AI would be hard because now a days every thing is AI based and to be honest it would be really boring without AI as there would be no phone, TV, projectors and etc for our entertainment and our life would become hard, we would not be able to call or message our loved ones and would not have any conversation with them for months. So as per my point of view life would be Really boring

Life without AI

Shashwat Rai BP

AI is one of the greatest example of modern technology. It is one of the most interactive place where we can get answer of our question. But had you ever think that what if AI will not exist. I think there will be not much effect in our daily life

Life Without AI

Lucky Kumar, VIII 'Beta'

Slow communication AI ke bina emails aur message mein autocorrect nahi hoga jisse typing mein zyada waqt lagega

Manual Navigation Google Maps jaise apps kam nahi Karenge Humein rasta dhundne ke liye logon se Puchna padega ya paper maps ka use karna padega.

No Personal Recommendations. Netflix Youtube aur Instagram par humein wahi videos dikhte hain jo humein ko pasand ha. No smart Gadgets Alexa

Siri aur smartwatches jaise device hamari baatein nahi samajh payenge

Life Without AI

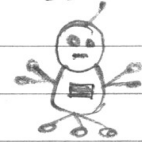

Pratik. VIII B

Without AI we would have to do every task manually there would be no smart assistants like Siri or Alexa to set reminders play music or control our homes Everything would require physical effort and more time we rely heavily on AI-powered GPS like Google Maps to find the fastest routes and avoid traffic without AI we would go back to using paper maps or asking strangers for directions on the road Today AI helps us find specific information in seconds without it students and researchers would have to spend hours in libraries searching through hundreds of books to find a single piece of information.

Life without Ai

Karan Kumar 8 'a'

Life without Ai is just like Curry without salt but saltless Curry does not means you can not eat it, it still contains vitamins

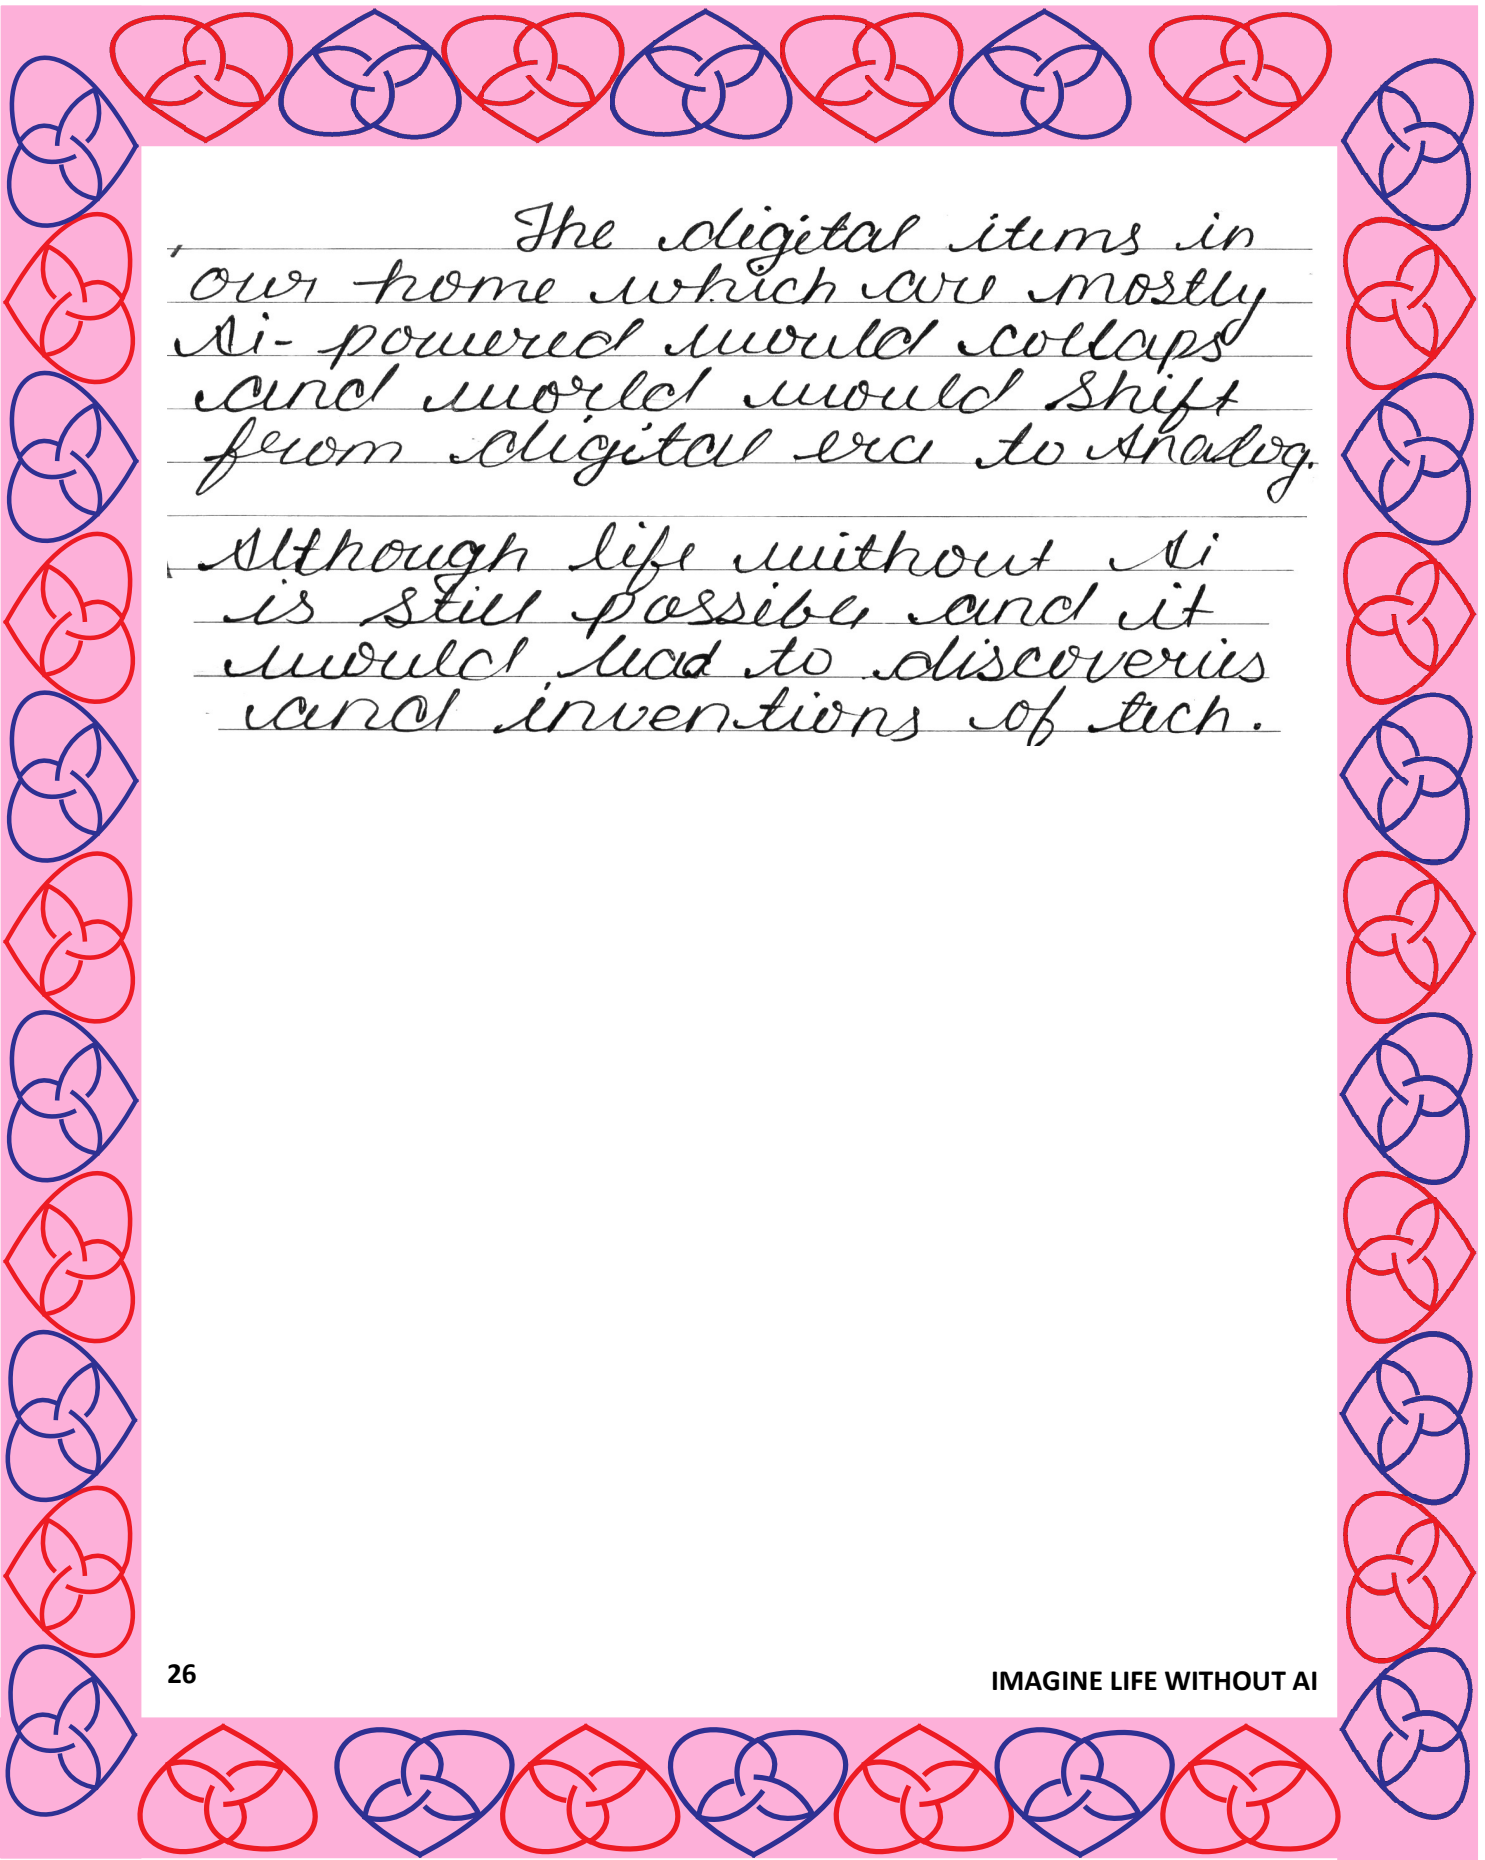

In today's modernising world, Ai has played a crucial role in reshaping our future. Life without Ai can be the worst nightmare for tech and Infrastructure Industry as Ai had lead. These industries relay on Ai for there complex to small projects.

Another Impact would be on us. A huge amount of time that we didn't used due to Ai's effect would come flooding into our lives.

Our daily tasks would become complex like insted of opening chatgpt we would again dive into the world of books.

The digital items in
our home which are mostly
Ai-powered would collapse
and world would shift
from digital era to Analog.

Although life without Ai
is still possible and it
would lead to discoveries
and inventions of tech.

Imagine life without AI!....

Rajnandini - VIII A

"Life without AI - Work smart, Not Fast!"

Life without AI will be difficult for us. Our world will shift to Analog Era or Manual Era. Paper works will increase. Humans have to work hard. Our Daily life will become slower. All the things which are now AI but digital will shift to manual works. Students use Gemini, Chatgpt and other AI tools to solve the questions, to their ^{clear} doubts. But without AI. This will not be possible. No Smart AI gadgets, AI Applications will be available. Nowadays, maximum number of people use AI in their daily lives that supports them. People have to face some consequences related to this.

"Be Creative not Dependent!"

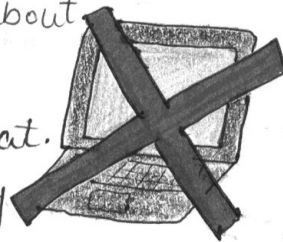

On the other hand, AI (Artificial Intelligence) harms our thinking ability. It Reduces the power of Critical Thinking. We have that ability to think but we are not using it. Also AI is harmful for us if we are giving it the access of our private or personal informations. If we are aware, we are safe. AI helps us to give ideas on the topic we gave it. But without AI we can innovate our own ideas.

"No AI ? = Less shortcut, More Innovation"!

Life Without AI

Aadya Uma 8a

Life without "AI" is difficult as there will be no Computers, phones and AI (Artificial Intelligence). It is very useful in today's world as AI helps us in many things like it helps to navigate the places if AI will not be there navigating places will become harder and communication will not be there if we will be curious about something we can't ask from AI to get more information about that. Offices and Banks will work slowly because of managing data. People would have to do all work by themselves.

Although, AI has also some good sides like people will learn to do hardwork and to be patient. Children will play outdoor games instead of watching phones or computers. Children can also be creative by creating or making projects by themselves. Families would spend more time with their family members.

Life without AI...

Sanwike Kaushik, 8A

01101

“Life without AI is like a night light curry without a salt - easy to have but missing the real taste”. Imagining life without AI is even difficult. Life without AI is difficult but possible. The life become slower. Some works which are done by Office workers are difficult without AI. Our life is like a curry and AI is like a salt. If there is no AI we can have our life, but missing real taste (AI). “Life without AI would feel like living in a world that breathes slower where questions wait patiently for answer, and curiosity walks instead of spirits.” There is a advantage not having AI^{not} in our life is to be dependent on ourselves. Our own creativity and thinking skills^{will} develop. But now a days we even do our homeworks and complete our notes w AI platforms like Chat GPT, Google Gemini, etc. We should be self dependent. ~~Our~~ But the advantage is our works complete in a minute. It becomes faster. We can ~~the~~ search for any information, learn new skills. In past life moves in calmer pace. “With AI ~~and~~ innovation becomes the daily habit”

AI!

IMAGINE LIFE WITHOUT AI

Life without AI

Adya Aya, 8 A

Life without AI would be slower and more dependent on human effort. People have to do most of the tasks on their own, like solving problems, studying from books and making decisions without smart technology. Communication and work would take more time and many ~~more~~ modern comforts will not exist.

In school, students would rely more on teachers, and libraries instead of quick ~~only~~ online answers. In daily life, people will interact more with each other, which could make relationships stronger. However, work in field like medicine and transport would be less fast and less accurate.

On the positive side, people would become more independent and creative. They would use their ~~more~~ thinking & skill more often.

In conclusion, life without AI would be simple but challenging where hardwork, patience, and human intelligence would play an important role.

Life Without AI

Tanajjum Parveen, VIII A

Life without AI would be both easy and filled consequences. In today's generation life is AI. Without AI nothing is possible, AI is ~~everywhere~~ everywhere. AI is slowly stopping us to love the nature's natural beauty and even from playing outdoor games. We are surrounded by AI - AI in phones, AI in smart machines, AI in robots etc. Every smart technology is made with the help of AI. It helps us too but, is dangerous. AI is going to take our jobs some day. People in their childhood who used to study and spend time with their family, now they have made smart phones their world. The biggest advantage of life without AI is that people would ~~be more~~ start talking to their families and nature once again. We ^{are} losing our ability, creativity and skills ^{due to AI.} ~~because~~ Nowadays other AI platforms like Chat GPT help us in providing notes and we are all depended on them. The harmful ^{rays} coming from our phones damages our eyesight due to which most of the children wear specs. It makes our work easier due to which we don't have to think or use our ~~any~~ ^{amount} percentage of brain. We should use AI but in a limited ~~amount~~, we should not overuse it.

Imagine Your life without AI

Shanya - 8A

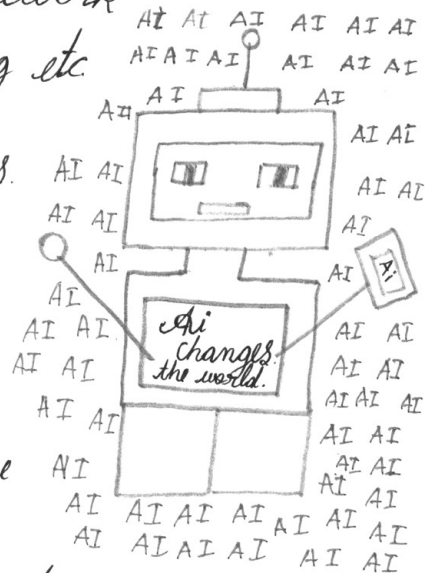

Life without AI will become a bit difficult as we are surrounded by it. If AI will not be there then we will live in Analog Era. Our ^{manual} works will increase. We use AI tools like CHATGPT, GEMINI etc, for our educational purpose like students, for gaining information, and making any project more presentable and effective. AI is very useful in our day-to-day life. AI is not just only for official works only, but for household works and there are many works that we can do with AI. It has enable us to buy new things also with it.

Earlier, the way we were looking in photo is only the original, but AI can generate images, all are not professional singers, but and cannot create music by own, but AI can generate songs, raps. Like children are future, AI is also our innovative future that is beyond our thinking. So, imagining life without ^{AI} can be difficult but no impossible. If, suppose AI will not exist then our deep learning, critical thinking, curiosity of knowing will increase. People will try to know new things by researching. Students will start framing their own answers by reading, and understanding every concepts. AI is a blessing also and curse also as AI clear our doubts and it is a curse because misuse of AI can lead to harmful results. Aware about AI as frauds also happens and people get trapped into the frauds. Using AI in a good manner can lead to innovative ideas.

Life without AI

Smita Singh - VII 'A'

We all know that nowadays we a every single person is. Ai but what if there will be no Ai, will life be difficult? Yes the life would totally changed. coz because everyon uses Ai in every task like homework housework farming & cooking etc there will be some difficulties but advantages. also like peopl will get out of their digita world and see the nature and they will get work to do because nowadays Ai is taking work of every system and data. Life would be a bit hard but also intresting for us and the world.

'Life Without AI'

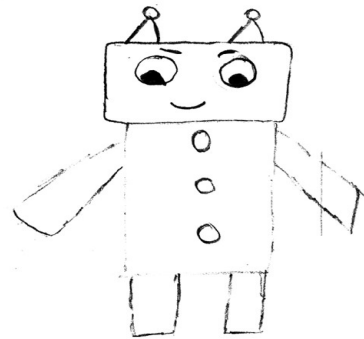

Harshit Kumar, VIIA

The absence of 'ai' cause some affect but may also make the world more traditional and beautiful and the world change into a peaceful analog period. The lack of Job in these days affect us a lot but without ai there are no lack of vacancies, the way of doing something become more traditional. Every hardwork shall be done by teamwork. There is no source of search engine or any smart tool so homeworks and projects take more time to complete. Student are totally rely on textbooks, teachers and their own thinking skill. It increase teamwork and critical thinking skills, it also makes study a bit harder and boring and then the world become like 90's period. It also some disadvantages in emergency only but it teaches us the importance of teamwork, our tradition and nature. In my vision without ai the world become so beautiful peoples understand their responsibilities.

Life Without AI

Anshika Singh, 8A

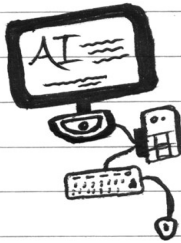

Life without AI would be simple but slower. People would have to do most work by themselves without help from smart machines. Tasks like searching for translating languages would take more time and effort. Students would depend more on books and teachers instead of getting instant answers online. In daily life, many things would be less convenient. Jobs would require more human effort, and some work might become harder. However, people might become more independent and improve their thinking and problem solving skills.

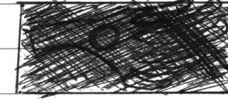

Life Without AI

Aneha Duman, 8A

Nowdays, the life without AI will be difficult for us. No online payments will be there. It may causes difficulties in our studies, those answer we get in the second. we have to read the books for those answers. No, tv shows will be there for entertainment prupose. We will spend more times with family as compare to life with AI. Life would be hard but interesting for us and our family.

Life Without AI

Aarav Sharma 8A

Without AI our life will be changed like Mobile phones, Sales, Laptop, computer and different types of electronic material. The things that we buy from store like (Flipkart, Amazon) will be stop. "No message no entertainment", our life will get boring because from earlier we are using electronic system. From now a days we can't study robotics or about the intelligence, by this situation no (coding) can be done for scientist for their satellite or no command on war missile and no radar system for fighter-jet and passenger Aeroplane.

Life Without Ai

Vatsalya Mehta, 8A

Most of the work today, are done by people using AI. For eg:- Homework, Presentations, etc. Even in future there will be a need of AI. Using AI while making presentations ~~take~~ a saves a lot of our time, while if we make them manually it would consume a lot of time just searching about the topic. A lot of students ~~in the~~ use AI to complete their hard assignments. In the future, Many high paying jobs would require the help of AI to make PowerPoint presentations or Excel spreadsheets. Now, Imagine the world without AI, People would waste their time ~~in~~ researching for presentations, and even after ~~study~~, they have graduated, there would be no high paying jobs. Even if there were ~~high~~ these jobs, some ~~would~~ people would get fired because they cannot work efficiently, then people would go for ~~other~~ low paying jobs which would not make them money, so the people ~~would~~ ^{will} not be able to enjoy ~~there~~ their lives because they are so focused on making money. While other people who have learnt to use AI, would have high paying jobs, so, they could focus on making their ~~lives~~ lives enjoyable rather than being stuck in the cycle of ~~allow~~ earning money. This is why AI is important in ~~our~~ lives. the modern era.

Life without Ai

Mikki Kumari-8 A

Life without Ai, is like peace and calm but Ai make our life easy, Nowdays people depended on Ai language. Nowdays Ai language is every were in school in collage ~~and~~ etc... If there is no Ai it make our life hard it ~~make~~ will make very difficult for us. But without Ai there where many job to do there are many skills to show etc... ~~But~~ Many organisation didn't work without Ai. Our world will not able to develop country. Education system will not able to walk ~~easy~~ easy. Ai is impotent for as because it make our life easy and simple.

Life Without AI

Sakshi-8A

Life without AI is very different AI helps us to do every things if he will only not do anything so then the people become lazy he helps in everything he will not work then the work become hard he helps to things are communication will not become hardest the life process will become very tofe the internet only not come then no body can see anything everyone will become lazy - Use internet help farface it help also not also it is good also and bad use for necessary things Use it for verise farfase became of manging data people work are also necessary to do her job or office work internet is necessary for our life and daily also.

IMAGINE LIFE WITHOUT AI

Imaging my life without AI

More AI/AM, & A

- Imaging my life without AI. Life without AI means returning to the manual slower paced world. For students this implies using physical books and library. The course which is available on AI, students have to go offline. catalogs and ^{instead} search engines. Relying on paper maps, over GPS and spending more time on manual tasks.
- A complete absence of AI will impact everything from how you wake up to global system like medicine and transportation function. You would rely on physical maps and road side signals and postures instead of GPS apps that predict traffic and suggest fastest routes in possible ways. Life without AI means A curry without salt. So ARTIFICIAL INTELLIGENCE is very important for our daily life. Without AI the life of human being manual and slower the task which AI do in seconds the same task take more time because human being is slower than AI.

Imagining life without AI

Shoh Rayyan - VIII A

Life without AI would mean returning to the manually slowing down the pace of world. The human power will more be used it is just like writing an exam without any pen. The human will also be in danger because today machines are doing all the high risks tasks like repairing submarines deep inside the sea or studying moons and other planets. The unemployment will increase, the students can't clear their doubt at home by asking chat gpt, perplexity and attending online classes like Akash, Physics walla, Byjus and so on. There are some advantage also like the people will be more interactive, they will sleep early and wake up early. Kids will play outdoor sports and do more physical activity rather than playing ~~a~~ minecraft, PUBG, B6M2, Roblox, freefire etc. They would be fit and more ~~more~~ energetic and would response quickly. Their brain would function properly because of sleeping early. If there ~~is~~ AI kids would be ~~play~~ playing online ~~game~~ games late night and not sleep. AI have both good and bad qualities.

Imaging your life without A.I

snashwat - VIII a

My life without A.I will be good for me, because i don't like A.I. We shouldn't use A.I. in our study. ~~We~~ Some of the children's in the world, they have only one problem. They use A.I in study and learn how to just copy the concepts and can't understand the concepts in studies. They also don't try even to understand the studies. We should not use A.I in studies, we should study by ourself, make our brain working. One day, the film directors work make movies, and films they will use A.I to make movies. The real, alive actors or actress didn't need to come on a shoot of any movie. There job will be in danger.

Life without AI

Kaustubh, 8A

Life without AI would be difficult for only some specific type of people because ~~nowadays~~ nowadays we are using AI not in a regular manner.

~~our necessary~~ But if it was necessary part of our life it would definitely have a big effect in our life. It's not a essential part of our life because it is kind of new thing for us and AI is also a developing sector. If we talk about its effect ~~in now~~ if it was vanished from our life it would have a big effect on some companies because a big companies uses AI for their work. ~~because~~ Like Companies in Educational ~~uses it~~ and food sector uses AI for collecting information and doing surveys. Many AI companies would also not be there in our life for example Goro, ChatGpt and Gemini.

Life without AI

Md. Osmat Khan-8th A

Life without AI would mean doing almost everything by hand or with much more effort. Instead of asking of a smart assistant for a quick answer or a summary, you would spend hours looking through a long website yourself. There would be no smart maps to tell you which road has traffic & no music apps that suggests songs you might like. We would have to rely entirely on our own memory & manual research for every small task.

Life without "AI"

Shourya Kumar, 8A

Life would be very difficult since we use AI

Almost For everytime, when we make homework we use "AI", when we need a speech we use "AI", when we need to compare we use "AI". If we wouldn't have AI It would be alot harder to reach different ~~the~~ questions we can still find without it we just need to be more responsible in our selves since we do the wrong use of AI. Its our work not AI's we have to be responsible and face the difficulties in our way so always use AI but carefully. If AI suddenly vanishes there would be your loss.

Use AI but carefully...

Imagine your life without AI

Syed Syam Faisal, VIII A

Without AI our life will get hard because from AI we can close the fans, lights etc. without ~~using~~ or wasting our energy. We can communicate to each other ~~in any time~~ anywhere on anytime without sending letter or waiting for letter. ~~AI have~~ advantages ~~on~~ without AI we can't cook new recipe without asking anyone.

From AI we can study online without wasting time to go coaching. ~~AI can~~ Without AI we cannot work online or work from ~~home~~ home. Without AI we cannot click photos or videos. ~~Now~~ ~~AI~~ ~~AI~~ Now were days, AI is our basic ~~need~~ need.

Life without AI

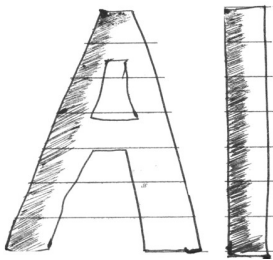

Alqam Azam - BA

Life without AI would be a lot different and yeah not small differences but big ones! • See without AI the world would be a lot productive because there is no one to help them at last movement like AI as of now AI has only taken a form of a chatbot to help us with → H.w, Pdf, ~~knowledge~~ knowledge etc. Perhaps it's not that advance or useful that world can't live without it yeah but it didn't mean removing AI from our lives will not effect us it will but very profoundly → like now we can't enter our math Hw and get answer in seconds, Now we can't get summary of all of our chapters and Pdf in one click now we have to learn by ourselves like a few years before and it's also good for our Planet "Earth" • See ai need knowledge and it get knowledge from data and that data is stored in sever- big servers we call those server's AI-data center those data center use energy and they release lot's of methane and CO₂ thus polluting atmosphere near them. And if the AI ~~data~~ center were to be vanished all of a sudden then stock market would crash all that 280 billions investment will suddenly be useless and all AI companies yeah → google, microsoft will take a huge hit in loss.

Life without AI

Puja Komar, -8A

Our manually work increas.
No Social media or any other platform will available.
No smart phone's for information we are ~~are~~ have to read many book. we are not aware about whole world. we can't contact our ~~femite~~ family relatives those who are shift in abroad. Nothing is ~~over~~ working. ~~we~~ ~~are~~ ~~from~~ ~~free~~ ~~to~~ ~~me~~.
I like now we forget about ~~not~~ but busy of nature and talk with friends many hours. so, for this ~~are~~ If we don't have AI we do our work and enjoy our life.

IMAGINE LIFE WITHOUT AI

Imagine life without AI

Anikesh Raj-8A

AI ~~can~~ have a very important role in our life. It make the work easier and faster.

AI make the world intelligent, if there will not AI people have to do more work and without AI, in every single work people will take more time to complete a easy work. Without AI people will not know about phones, and other things. AI have an very important role on the earth for the people.

Imagine your life without AI

MD. Tahmeed. Alam, VIII A

If there will be no AI then our life will become very hard and we will struggle ~~through~~ in every thing like solving problems and very people will ~~suffer~~ ~~unemployment~~ & will not get job because there is no AI and some students will suffer from not solving problems and life will be very slow and boring it is just like a footballer without legs.

— Human
= Backbone

Life without AI

Vaishnavo kumar, VIII 'A'

Life without AI. Imagining life without AI is like tea without sugar now every thing is depended on ai even many people about what's happening around from it every school, collage, university mangement are depended on it the records of ~~the~~ childrens etc... even many couldnt even survive without mobile the world would not be succesful of and educated this much many girls ~~and so called~~ ~~reliasse~~ would not get opportunity organisations would not be able to be, we wont get to know about cells, plants, univers ~~with~~ what's around us made up of many of us wont get jobs. many of us are able to show our talents through ai.

Life without AI

Harsh Raj, 8A

The life without AI is hard because AI help us to do very thing and now we have behaviour to do all the things by AI and it gets disappear then we can't do work of our schools by AI like we do our homework. ~~our~~ sometimes our fathers do the work of office by the help of AI and without AI we can't do that we phase problems while doing the work we have to be self independent without AI we sometimes ~~even~~ some people ~~talks~~ makes picture by the help of AI without AI life becomes very much hard as when we ^{sometimes} tries to do something we ~~firstly~~ asks from AI is it good for ourself or not some recipies we asks many ^{many} ~~some~~ companies ^{uses ai so they} ~~will~~ phase too so without AI life is very much hard.

LIFE WITHOUT AI

Vats Vaibhav - 8A

LIFE WITHOUT AI IS JUST LIKE ~~LIVING~~ LIVING WITH ZERO TECHNOLOGY IN THIS TYPE OF GENERATION. NOWDAYS, AI IS IN ALL PLACES LIKE, CARS, PHONE, PC, LAPTOP, even PEN AND OTHER ELECTRICAL APPLIANCES. AI IS IMPORTANT FOR STUDIES, ANIMATING AND FOR SOME TIPS AND TRICKS. WITHOUT AI MANY PEOPLE WILL GET JOBS LIKE, DOCTOR, ENGINEER, ~~BE~~ BECAUSE AI HAS TAKEN MANY JOBS IN THE WORLD. IMAGINING A LIFE WITHOUT AI IS GOOD AND BAD BOTH FOR SOME PEOPLE

LIFE WITHOUT AI

Akhinav, 8A

★ A life without AI is the life of human are natural and the AI life is to become human made. there some AI thing are :-

- i Smartphones
- ii Television
- iii Smart watches
- iv Tab or Tablets
- v Laptop

★ The AI is to Create a new generation to old generation.

★ The AI Created then all the things became a AI like automatic transport, online Study for student and electrical fans.

★ The student are search anything for Gemini, ChatGPT, Google and Code.

★ The things which are creating in a new generation are:-

- i Robots
- ii AI cars
- iii Lifts

- ★ There are more country which is only used of AI and India is also decided to create in India AI things.
- ★ The AI is coming in india then no works are do offline ~~DD~~ in the apps.
- ★ The ~~A~~ which are ~~A~~ human is used for jobs like Exness, Probo, Cread, Delta exchange and Dhan apps. These apps are used for trading investing and for ~~business~~ buisness.
